

# Protect your data while meeting the highest security standards recognized by the US government.

Metallic, from Commvault, delivers enterprise-grade SaaS data protection without the complexity. With broad-ranging coverage across apps, endpoints, and hybrid cloud environments, Metallic currently offers the only data protection portfolio capable of meeting stringent FedRAMP High security protocols required by today's federal agencies.

**Comprehensively protect data with ease**

**Safeguard against deletion, corruption, and attack**

**Accelerate adoption of cloud technologies**

## The only FedRAMP High data protection solution currently available

**Trusted Protection.** Built on Microsoft Azure Government Cloud, Metallic meets the US government's highest confidentiality, integrity and availability standards for federal agencies.

**Total Coverage.** From cloud to on-prem workloads, Metallic delivers award-winning SaaS data protection solutions - without compromise. Leverage multi-layered security controls, flexible backup and granular restore options, and ultimate scalability for comprehensive coverage across your entire data estate.

**Hardened Security.** Metallic SaaS is proven to meet some of the most stringent data security objectives and incorporates additional access, identification, and incident response controls which extend beyond federally-mandated security requirements.
