

Connected Food

Streamline operations and improve food safety using Insight's IoT platform.

Business challenge

Restaurants and food retailers are actively searching for innovative technology solutions to improve food safety and reduce food waste.

- Eliminating food waste has a tremendous impact on the bottom line.
- Manual tracking of temperature and humidity for food safety compliance is a time-consuming process, prone to human error.
- Effectively managing an intelligent restaurant environment requires a unified application infrastructure.

How we help

From farm to consumer, Insight's Connected Food solution, powered by Insight Connected Platform™, creates operational intelligence across every node of the food supply chain. By providing automated temperature and humidity monitoring with real-time alerts, Connected Food enables users to simplify food safety compliance, ensure consistent quality and reduce food waste.

Acting as a secure, centralized hub, the platform ingests, visualizes and triggers events from temperature and humidity sensors to reliably gather insights and provide timely, actionable alerts. A simple, user-friendly interface makes it easy to receive notifications, track trends and gain new insights across your business. Connected Food supports configurable user-access levels, empowering individuals to improve outcomes in their own roles by leveraging relevant data and control through a single pane of glass.

Working with Insight to equip your business with environmental monitoring through Connected Food will also lay the groundwork to build and scale future connected solutions. This structured approach allows you to deploy and manage simplified, cost-effective solutions over time, creating opportunities to gain cross-domain insights, generate new revenue and improve your service capabilities.

Benefits

- Quick, easy-to-read visualization of temperatures and humidity at a device level
- Configurable rules engine to enable greater adherence to food safety regulations
- Real-time, configurable alerts of temperatures outside of regulations
- Ability to quickly identify areas of concern and establish corrective actions

Insight helps you manage business today and transform the future.

Explore the possibilities

Insight's cloud-enabled Connected Food integrates with partner technologies for a robust, scalable and flexible solution. As a super solution integrator, we leverage our deep pool of intelligent technology experts and support from 3,500+ partners to create a robust Software as a Service (SaaS) product.

Our flexible SaaS offering:

- Time to value in as little as 10 days
- Plug-and-play capability

Recent client outcomes

Connected Food

Regional brewery

- Immediately identified issue with a cooler unit that saved on future costs.
- Drove change in temperature settings to help maintain optimal temperatures within industry standards.

Connected Platform: Detect & Prevent

National grocer

- Provided real-time alerts for the detection of high body temperatures.
- Enabled employees to quickly and safely return to work at distribution centers.
