

# Getting Started With Microsoft Defender for Cloud

Protect your workloads  
and enhance your  
security posture with  
Microsoft Defender.

## The cloud solution you've been waiting for

Cybercriminals are getting more sophisticated, finding new, elaborate ways to target cloud environments. As cyberthreats continue to rise, organizations like yours face increasing pressure to stay on top of their cloud security.

Fortunately, Cloud Security Posture Management (CSPM) solutions provide visibility that deepens your understanding of your current security stance and safeguards your multicloud and hybrid cloud environments against an evolving threatscape.

Let's take a look at how Microsoft® Defender for Cloud, a robust cloud security posture tool, will alleviate IT pressures and shore up protection across your cloud ecosystem.

## Prevent, detect and respond.

The cybersecurity landscape is growing in complexity, but you don't have to navigate CSPM and Cloud Workload Protection (CWP) alone.

By adopting the enhanced security features built into Microsoft Defender for Cloud, you can rapidly prevent, detect and respond to threats across your entire cloud ecosystem.

Additionally, Microsoft Defender finds weak spots across your cloud configuration to help detect vulnerabilities and protect your workloads from malicious attacks — giving you the peace of mind that comes with knowing your critical assets are strongly secured.

## Get ready to strengthen your security posture.

Your security systems are an essential component of business resiliency, hardening protection and mitigating risks — and better visibility provides the foundation for a stronger security posture.

With Microsoft® Defender, you get continuous assessments that help you strengthen the configuration of cloud resources running in Azure®, AWS®, Google Cloud and on-premises.

With more in-depth, detailed insights, you'll:

**Know your security posture** and identify vulnerabilities before they become risks.

**Harden resources and services** to align to **Azure Security Benchmark** and **AWS Security Best Practices** standards.

**Detect and resolve threats** to your cloud ecosystem.

## Simpler compliance management

Meeting compliance requirements is not just a mandatory process. It's also a key component of strengthening customer relationships and fostering public trust in your brand.

Microsoft Defender simplifies compliance management with built-in policies and prioritized recommendations aligned to key industry and regulatory standards, plus the versatility to build out custom requirements.

And, actionable insights automate recommendations to help you configure your vital resources securely and more easily meet your compliance needs.

## Trusted threat protection support

Your multicloud and hybrid environments require modern threat protection.

Microsoft® Defender innovates cloud security by arming you with a rich understanding of vulnerabilities, insights from industry-leading security research, and powerful protection across Virtual Machines (VMs), containers, databases, storage, app services and more.

Trusted cybersecurity solutions from Insight and Microsoft defend resources and workloads across your multicloud and hybrid environments.

## Security experts on your side

You don't have to fight cybercrime on your own. Microsoft Defender for Cloud, available from Insight, delivers a transformative security solution that shields your multicloud and hybrid cloud workloads against cyberattacks.

Together, we'll boost your cloud security posture. Talk with an Insight expert today to see how Microsoft Defender for Cloud can help you do business with greater confidence.

# About Insight

Insight Enterprises, Inc. is a Fortune 500 solutions integrator helping organizations accelerate their digital journey to modernize their business and maximize the value of technology. Insight's technical expertise spans cloud and edge-based transformation solutions, with global scale and optimization built on 33+ years of deep partnerships with the world's leading and emerging technology providers.
